

# Web Entry Form

## What do I put for an index when setting up the online form and what is the number for?

Any number. 1 is good.

Since you will be using the Database option an index is required so that you can run multiple pools (i.e multiple OfficePool files). Each file must have a UNIQUE index. Then, when you go to import the brackets, you will only get those brackets associated with the file's index.

Unique solution ID: #1019
